1 Introduction

This document describes how to install 602XML Filler application that is intended for filling in electronic forms with output in XML format.

2 Preparation prior to Installation

2.1 System requirements

Prior to installation start, make sure, that you have permissions for the target computer to install new applications, i.e. that you have administrator permissions and that the computer where you intend to install 602XML Filler meets 602XML Filler system requirements:

Operating system:

- MS Windows 98, ME, 2000, XP, 2003 Server nebo VISTA with MS Internet Explorer web browser 5.5 or higher

Note: 602XML Filler cannot be run on Windows NT and Windows 95.

HDD free space:

- 40 MB free HDD space for installation

RAM memory:

- 64 MB in MS Windows 98, ME, 2000 Server and MS Windows 2000 and MS Windows XP
- 128 MB in MS Windows 2003 Server
- 512 MB in MS Vista

2.2 Older versions of 602XML Filler

If you start 602XML Filler installation on the computer where an older version of this application is installed, you don't need to remove the older version. You'll be notified of this existing version during installation. For more information see Chapter 5 Upgrading 602XML Filler installation.

Note: 602XML Filler application can detect a newer version available on the www.602.cz webpage automatically, and if allowed to download that version. You can search for a newer version manually directly from the 602XML Filler application by selecting the „Check for Updates...” command from the „Help” menu.

3 602XML Filler Installation

1. After installation program start, confirm the welcome screen by clicking the **Next** button.
2. In the "License Agreement" dialog box, read and confirm the license agreement.
3. In the „Select target location” dialog box, confirm or, using the **Browse** button, change the directory on your computer where 602XML Filler will be installed.
4. Another dialog box that will appear in case of new installation is “Select Associations”. By checking the “**Register ZFO to 602XML Filler**” check box, it is possible to register this filename extension and thus to enable opening of ZFO files directly in 602XML Filler application. Then you select “**Register FO to 602XML Filler**” option; by means of that this filename extension is registered for opening of FO files directly in 602XML Filler application.
5. In the Installation Type dialog box, you can confirm or reject installation of the **Support for PDF Export** component of 602XML Filler application that serves for conversion of forms to PDF format. You do not have to install this driver if it has been already installed with 602XML Designer or 602XML Designer Express application. Confirm by pressing the **Next** button.

6. In the following „Program Installation Ready“ dialog box, you will start by clicking the **Install** button copying to hard disk.

Note: If you install the minimal version of 602XML Filler, there'll be an extra dialog after step 3 that allows you to select further options for downloading additional components that are not installed by default in this version of 602XML Filler. To select a component check appropriate checkbox.

Note: To download any of these components internet connection must be available. According to your connection speed the installation may take up to several minutes.

4 Updating the minimal version with the full version

If you want to update the minimal version of 602XML Filler with the full version, proceed as usual by executing the 602XML Filler full version installer. The installer is able to recognise, if its version is the same or newer than the currently installed version. For more information see next chapter.

5 Upgrading 602XML Filler installation

If you start 602XML Filler installation on the computer where an older version of this application is installed, „**Modification, reinstallation or program removal**“ dialog box opens; you will be asked, whether you want to replace the older version with the newer one with modification of some installation settings (select „**Modification**“) or if you want only to replace it without change of original settings (select „**Reinstallation**“).

6 Uninstalling 602XML Filler

If you want remove 602XML Filler from your computer, run the uninstallation routine of the installation package from the Add or Remove Programs dialog or by selecting the „Remove 602XML Filler“ action from the 602XML Filler program groups in the Start menu.

Note: 602XML Filler also allows a silent installation on end user PC. Parameters and options for the silent installation can be found in another document wizard.
